

PIXEL — Port IoT for environmental Leverage

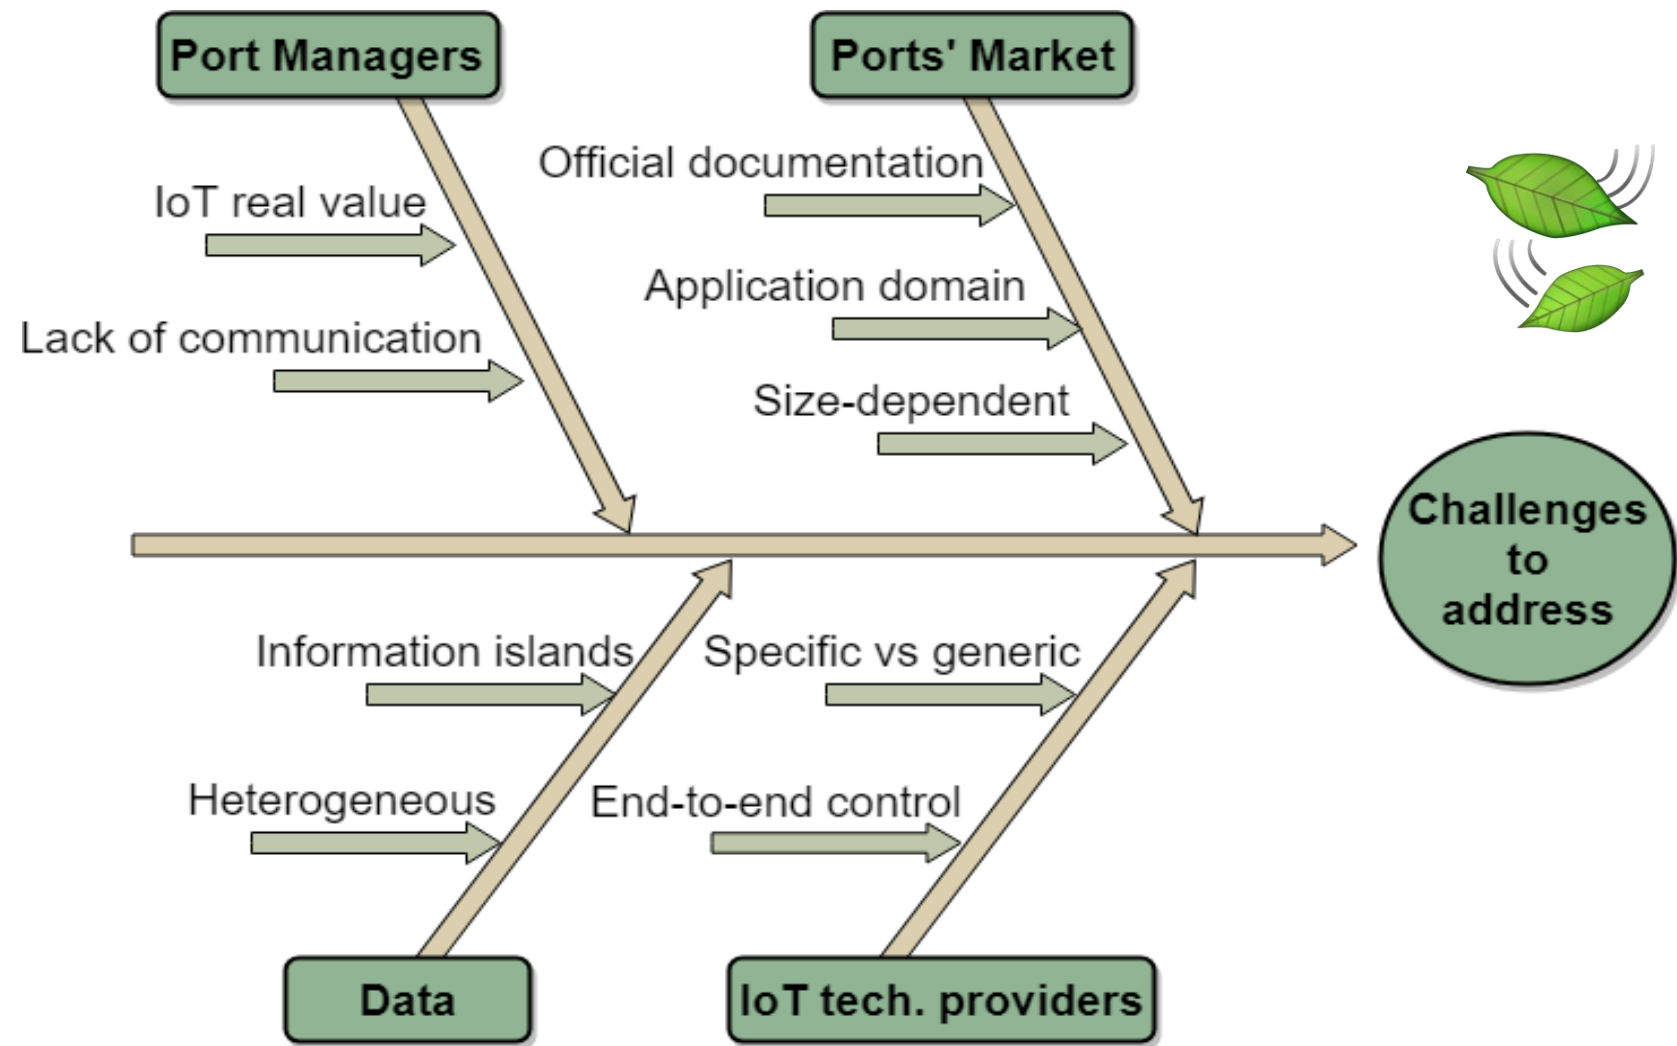

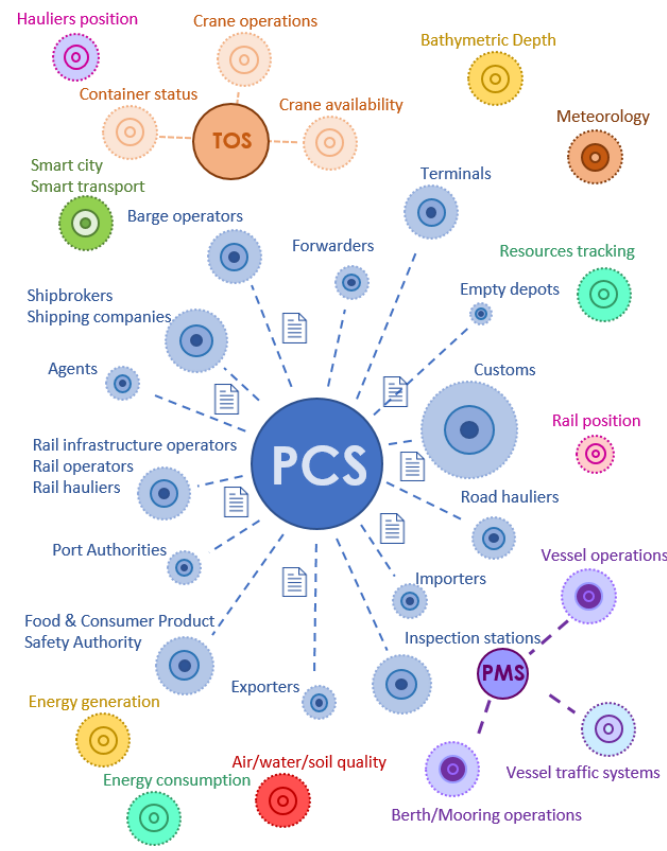

COREALIS Final event
Final Conference – 23rd April 2021

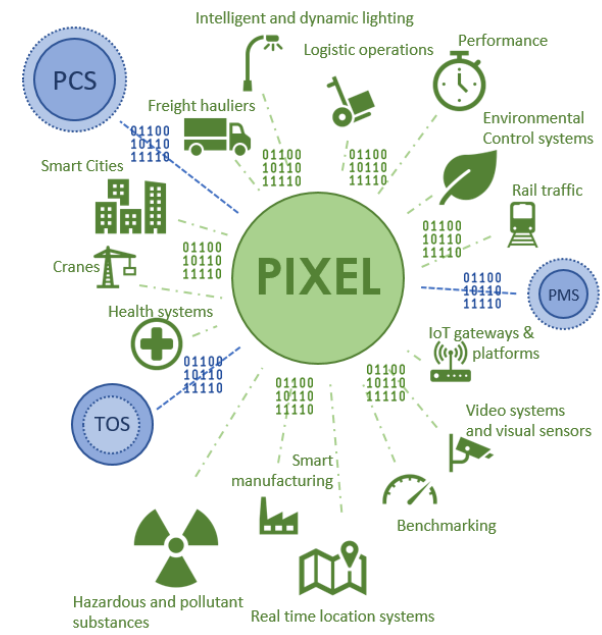

Carlos E. Palau (UPV)
Project Coordinator

What is PIXEL being? Challenges common to COREALIS

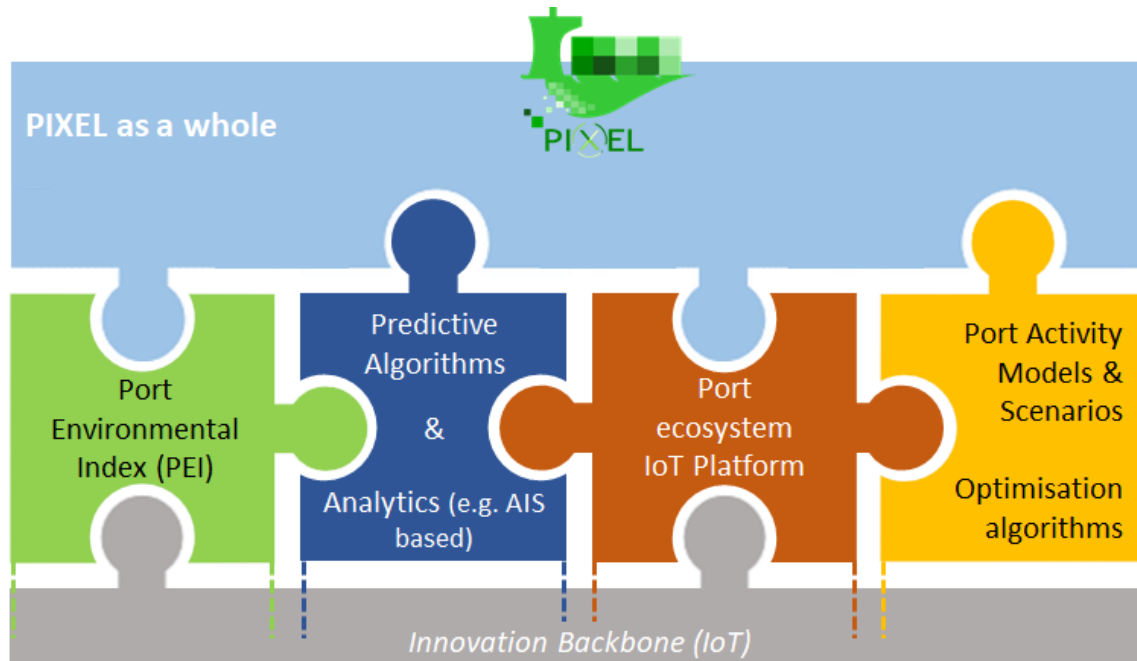

PIXEL in a nutshell

How **PIXEL** proposes to drive digitisation towards Port of the Future

PIXEL innovative proposal

Reduction of environmental impact of port activities

Reduction of operational and infrastructural costs

Improvement of logistics efficiency in multimodal hubs

Better Port-City integration

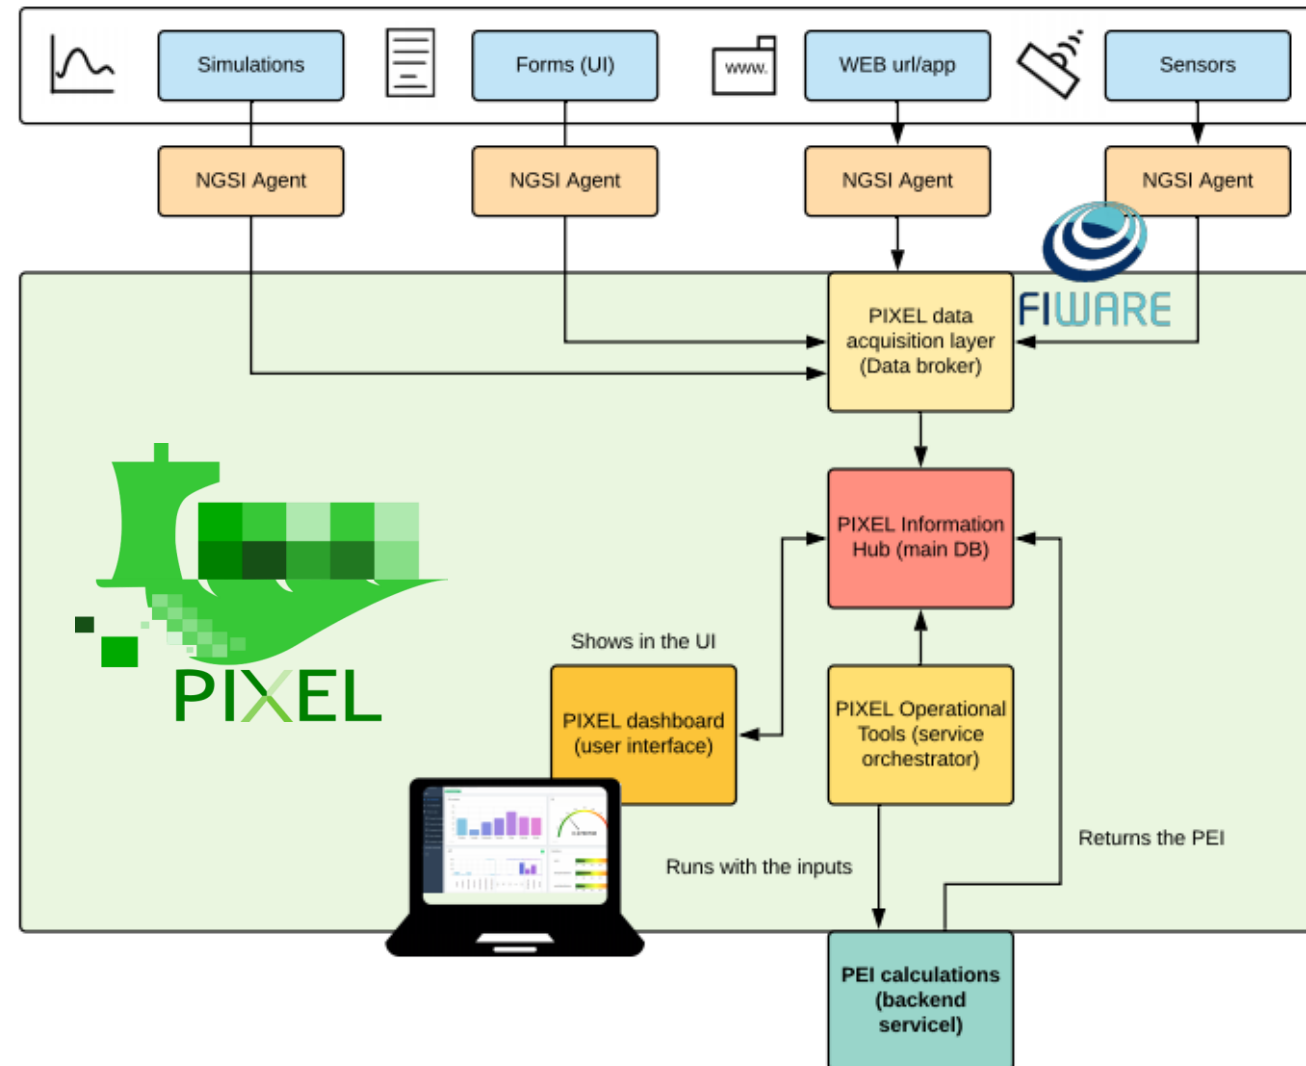

Less dependency on different technology providers when attempting digitalisation

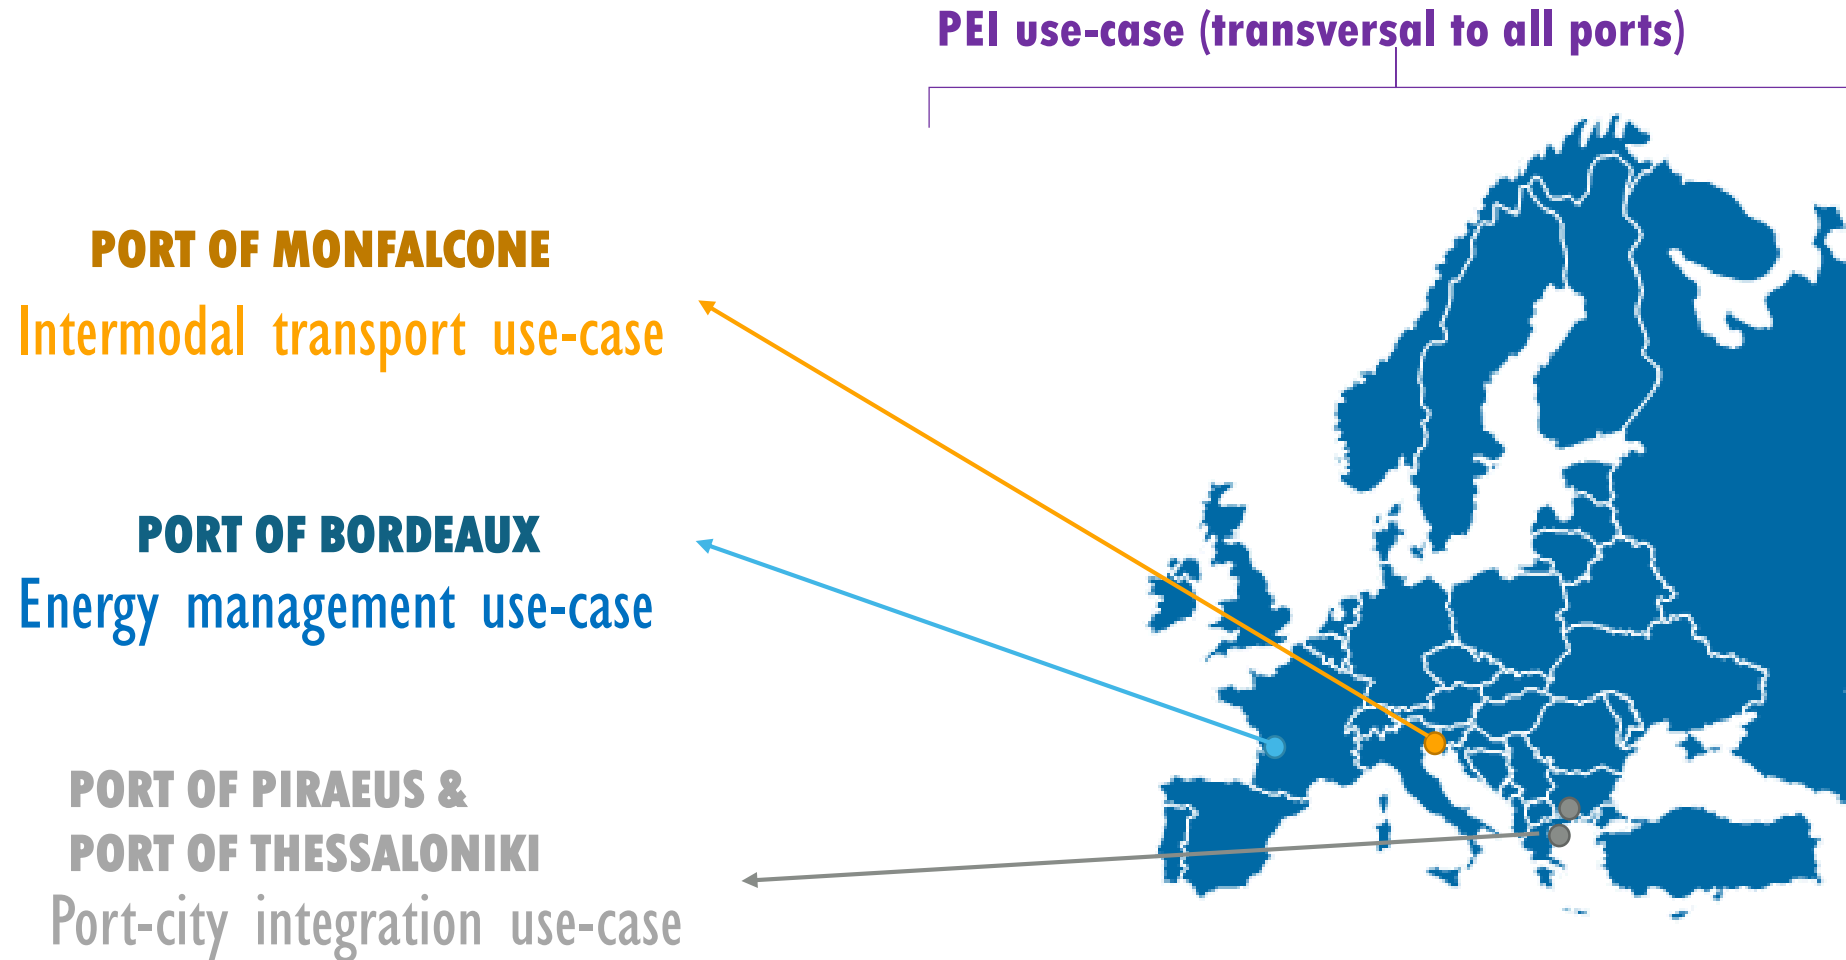

Technological proposal

- **Data Acquisition Layer (DAL)**, which is in charge of gathering data and sending it to a FIWARE Orion context broker. In this context, several agents based on the pyngsi framework have been developed acting as data gateways.
- **Information Hub (IH)**: a custom (PIXEL) component based on an ELK implementation, the central data storage component.
- **Operational Tools (OT)**, a custom Java-based component that orchestrates the proper execution of all other modules (containerized using Docker).
- The **dashboard** is a web application (developed in Vue.js) for configuring and observing the results of composite indicator, models, predictive algorithms and sensor data monitoring.

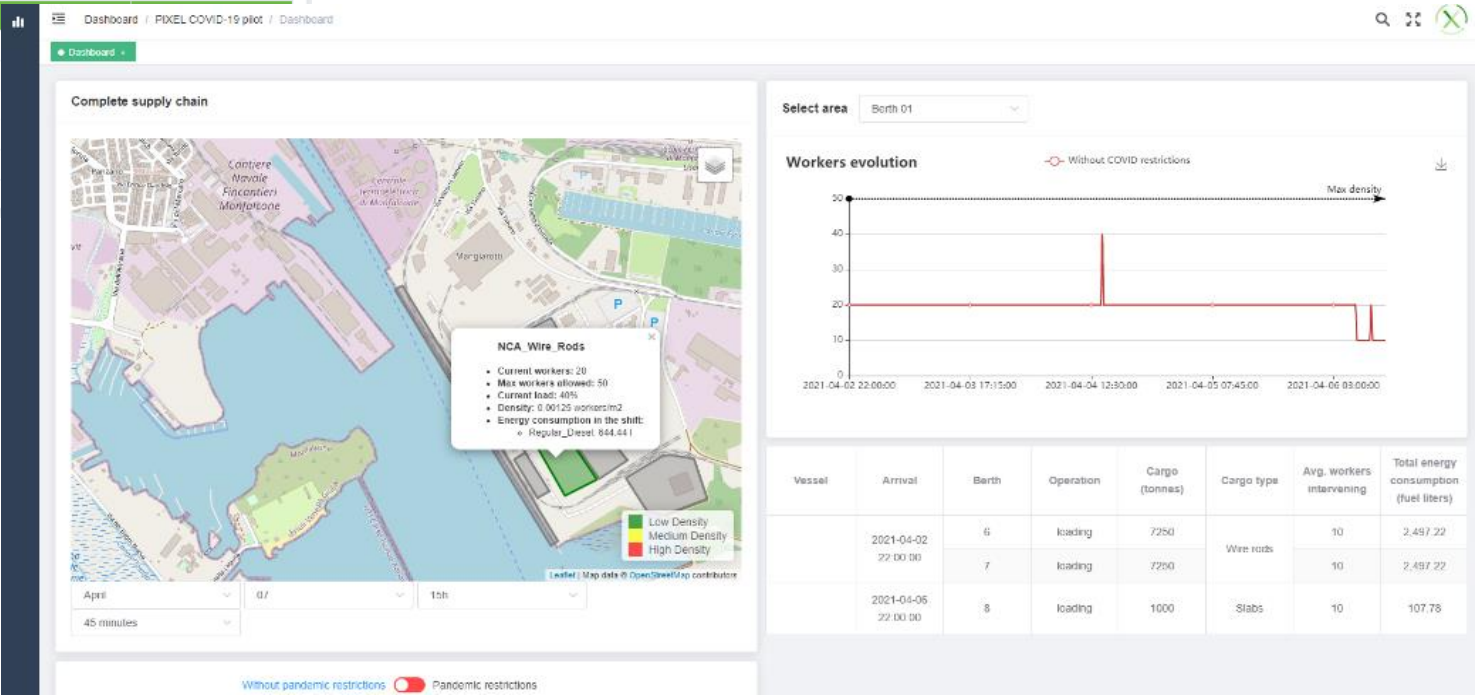

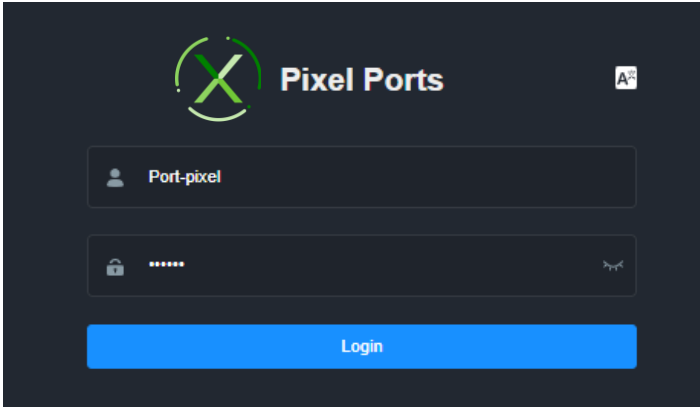

PIXEL pilots: usage in real life port scenarios

How PIXEL looks like

How PIXEL looks like

How we will miss PIXEL-COREALIS encounters...

DtF Workshop with Experts, Oporto, October 2018

CID ALICE-DtF OBOR,
Athens, November 2018

DtF Mid-term event, Trieste, May 2019

We had good times together... seeing each other and sharing the vision of Port of the Future innovation...
